

NEW PRODUCT HIGHLIGHT | MAR2025

febi 196606

To fit:
Vehicles with 9-32 Volt onboard voltage

3240 Lumen, IP 6K9K, ECE R10, R148,
R65, EMC

Work Light with Flashing Light

Function

Work lights are essential for illuminating dimly lit work areas, ensuring safety and helping to prevent accidents. With the bottom row of LEDs able to be controlled independently of the others and emit the colour yellow, febi 196606 Work Light can also function as a flashing light.

Cause of failure

Problems with the electrical connection, damaged wiring or defective internal components can lead to the failure of this work light, as can mechanical damage, e.g. due to collisions. Although the high protection class IP 6K9K ensures a very good seal, moisture or foreign bodies may penetrate due to age over an extended service life, or as a result of damage occurring to the housing or seal.
