

FORD 2.0 – 2.4L Duratorq – FAI universal chain kit

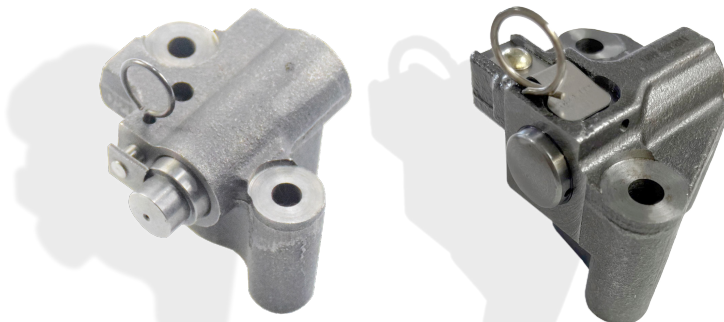

This series of engines, manufactured between 2000 – 2006 had eight various combinations of parts depending on power output.

FAI's solution was to offer one UNIVERSAL kit to cover ALL variants, utilising the highest output "matched" component parts.

Regardless of what parts you remove, you MUST fit all the "matched" parts in the FAI kit to ensure long term reliability.

In addition, the tensioner and guide rail were modified/revised a number of times during this period.

Note: There will be one guide unused, this is because we include guides for the two blocks that FORD produced in this period (marked 1 & 2 in the image).

Old Design

FAI (latest OE)

You may notice that the design of the FAI tensioner differs to the tensioner removed.

This is not a problem, the FAI tensioner (latest OE design) and matched parts in TCK47 will 100% replace the parts removed (OE or After Market).

Applications:

FORD Mondeo III | 2.0/2.2TDCi 10 | 2000 – 03/2006
 FORD Transit | 2.0/2.4TDCi 01 | 2000 – 05/2006
 JAGUAR X-TYPE (X400) | 2.0/2.2d 07 | 2003 – 12/2009
 LDV Convoy | 2.4d | 03/2002 – 04/2009
 LTI TX | 2.4d 10 | 2002 >

FAI products are designed for use in standard, unmodified vehicles and are not intended for custom or altered applications. All components must be installed by a qualified technician.

Please note: FAI products are supplied without fitting instructions.
