SKV TRUNK COVER SLIDERS, SHELVES

About the product

Trunk Cover Slider, also known as a luggage compartment cover, is a practical element of equipment that is mainly used in estate cars, SUVs, and hatchbacks.

Its main purpose is to cover the contents of the trunk, which increases security (protecting against theft) and improving the vehicle's interior aesthetics.

Depending on the car model, the cover can be manually or automatically operated, and some versions are equipped with a spring-loaded retracting mechanism or telescopic guides for easier handling.

The Parcel Shelf is the element located above the luggage area in hatchbacks, estates, or SUVs.

Its main function, similar to the trunk slider cover, is to conceal the contents of the trunk, while also offering additional usability features.

It is usually made from rigid material – a plastic or lightweight composite – and may be covered with fabric matched to the vehicle's interior.

The parcel shelf is a solid, practical solution for those who value simplicity and functionality, whilst the trunk slider cover offers greater flexibility and a modern look.

The choice between them depends on how you use your car – if you often carry larger loads, the trunk cover slider will be more convenient; if you value extra surface area and durability, a car with a parcel shelf may be the better option.
