

## INA Service Info

# Optimized tension and idler pulleys

## New coating

Due to the continuous development of our products, some of the tensioners and idler pulleys will now be provided with a coating. This coating offers the advantage of greater resistance to corrosion.

Figure 1: Previous version of the pulleys

Figure 2: Pulley with a new type of coating

During the transition phase, mixed stock of bearings may result in both variants being delivered. Both versions meet the technical specifications and can be installed without concern.

Please observe the vehicle manufacturer specifications!
