TECHNICAL BULLETIN

TB0014 - T9315 Automatic Belt Tensioner

T9315 Variants

T9315 has been in FAI's offer for many years as it is used in TBK104 and fits a large range of Ford petrol engines. The tensioner which was originally manually tensioned was redesigned by Ford to be automatic. There are two accepted designs for the automatic tensioner and both are fully interchangeable. It is possible that either design will be packed into our kits.

Variant 1

Similar in design to:

Contitech: V55226
INA: 531058610
QH: QTT948

Variant 2

Similar in design to:

Febi: 11291
Gates: T43127
SKF: VKM14222
NTN: GT352.18
