How to select the correct coil spring for your vehicle !

The following tables list all part numbers for the front- and rear coil springs specified by Cupra for the Terramar.
The quickest and most reliable way to select the correct replacement coil spring for your vehicle is explained here.

Colour code and marking on the spring

Original front coil springs for the Terramar carry a colour code that can be used to identify the original part number of the coil spring that was factory-installed in the vehicle. The colour code can be seen without removing the spring from the vehicle, as shown in the photo below.

Rear coil springs do not carry a colour code but, instead, a white label that shows the original equipment part number of the coil spring.

This label is more difficult to access and requires the vehicle to be raised on a lift and approached from the rear in order to read it.

Use the front- and rear coil spring tables shown below to select the correct ERL reference for your vehicle.

Front Spring

Spring Seat for the Front Coil Spring

Eibach recommends replacing the lower spring seat (OE-No. 5Q0 412 545 D) where the front spring locates on the damper whenever new front coil springs are installed.
This rubber spring seat prevents metal-to-metal contact between the coil spring and the damper plate, thus extending the service life of the coil spring.
In addition, it serves to reduce noise transmission into the vehicle interior.
This spring seat is subject to wear and tear and should be inspected and replaced if damaged.

Spring Seat for the Rear Coil Spring

Eibach supplies all rear coil springs for the Terramar with a rubber spring seat firmly installed on the lower coil.

Available in four different sizes and covering a wide range of wire diameters, these rubber pads significantly reduce corrosion of the coil spring and the lower suspension link where they meet, while also also minimising noise transmission from the road into the passenger compartment.
