

## MEYLE shock absorbers: the future of driving comfort.

Shock absorbers are constantly subjected to enormous stresses, from rough roads to significant environmental factors, and therefore qualify as safety components, with a significant impact on driving behaviour and the vehicle's braking distance. Quality – and more specifically, our quality – should take priority to minimise any real danger. After all, our shock absorbers are concerned with three things in particular: the safety of passengers, their satisfaction and the future of driving comfort. Nothing more, nothing less.

Our engineers therefore continuously test the quality of our parts. As MEYLE shock absorbers are tested for extreme situations, all to ensure they stand up to the biggest test of them all: the road.

- **Full coverage**

Our MEYLE ORIGINAL shock absorbers cover around 70% of the European car park of 255 million vehicles.

- **Full quality**

Developed and tested in Germany – in accordance with the most stringent MEYLE quality standards.

- **Full compatibility**

It goes without saying that our dust protector kits with rubber buffers, dust protector caps and strut mounts are compatible with our MEYLE ORIGINAL shock absorbers.

### Trusted to the full

Our MEYLE recommendation? Consider the shock absorber test for customers now and offer a switch. After all, doesn't quality beat wear? Important for safety: replace them after 80,000 kilometres\* at the latest and always in pairs.

\* Please observe the manufacturer's specifications
