ALUMINIUM ENGINE OIL PAN

for BMW
OE: 24 11 8 612 901

Triscan SELECT: 8900 11005

OEM Design

Plastic oil pans found on late-model engines and transmissions routinely warp over time, fracture when subjected to minor impacts, and often contain irreplaceable fluid filters.

Filter cover permanently welded closed

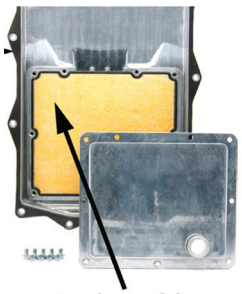

Problems

- Road debris impacts can puncture fragile OE plastic pans, resulting in oil starvation, internal damage, and costly towing fees.
- Plastic pans can warp and allow leakage in as little as 100,000 km of use.
- Filter element can't be replaced separately, requiring replacement of entire assembly.

TRISCAN SELECT

Triscan offers aircraft-quality aluminium pans, which are typically upgraded with cooling fins, reinforcement webbing, FKM/Viton elastomer seals, and even serviceable filter assemblies.

Replaceable fluid filter

Advantages

- Alloy aluminium pan resists debris impacts and is impervious to heat, motor oil and automatic transmission fluid.
- Durable Viton seals for reliable sealing.
- Replacement filter elements are readily available from Triscan SELECT.
- Unlimited Mileage Lifetime Warranty.

Vehicle Applications

2-, 3-, 4-, 5.- 6-, 7-, 8-Series, Alpina B7, M235, M240, M340, X1, X3, X4; X5, X6, X7, Z4
