

FITTING DIRECTIONAL BRAKE PADS

Many directional pads have an arrow on the back plate to indicate the rotational direction of the brake disc. When fitting these brake pads, make sure the arrow points in the same direction as the wheels turn during forward driving.

FITTING BRAKE PADS WITH A CHAMFER ON THE FRICTION SURFACE

If no arrow or letter is used but the Jurid pads are equipped with a chamfer, the chamfer needs to be presented at the leading edge where the pad first contacts the brake disc when fitting the brake pads.

Where the pads are equipped with a chamfer on both edges, the edge with the bigger chamfer area should be presented to the leading edge where the pad first contacts the brake disc.

FITTING BRAKE PADS WITH A CRESCENT CUT-OUT TO THE NOISE REDUCTION SHIM

If no arrow or letter is used but the Jurid pads are equipped with a crescent or half-moon cut-out from the noise reduction shim, the crescent or half-moon needs to be presented at the leading edge where the pad first contacts the brake disc.
