

From 2 in 1 - the pre-assembled MEYLE ORIGINAL wheel bearing kit.

Time is money – particularly at the workshop. MEYLE engineers are fully aware of this fact, developing and creating repair solutions that save time and money.

The new pre-assembled MEYLE ORIGINAL wheel bearing kit provides workshop employees with all the necessary parts as a complete set, with the flange and wheel bearing pre-pressed for installation. The two components are already assembled to enable the fastest installation possible, eliminating the need for the press.

Repair times at the workshop are thus reduced significantly: installation requires up to 25% less time, as there's no need to press and install individual components.

This MEYLE KIT covers a worldwide Car Park of over ten million vehicles, including models from Audi, Ford, Mercedes-Benz and VW.

[MEYLE no. 014 753 0003, 100 653 0033, 100 653 0034 and 100 653 0035 are available. An expansion of the portfolio with further references is planned.]
