Oil Gas Separator

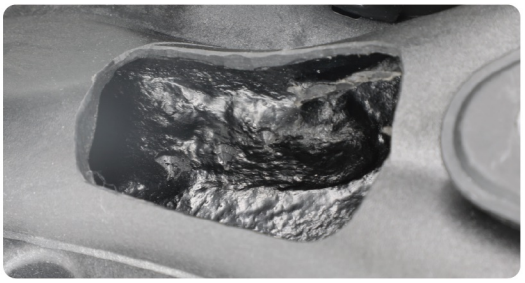

Oil Gas Separator

4 Years
STO

Inner Cavity of the Water Channel

The inner cavity of the water channel adopts the water auxiliary process to solve the problem of leakage when the water channel is blocked.

OE

The inner cavity of the waterway adopts gas-assisted technology, the inner wall of the waterway is uneven, easy to cause blockage and leakage.

Pressure Relief Valve

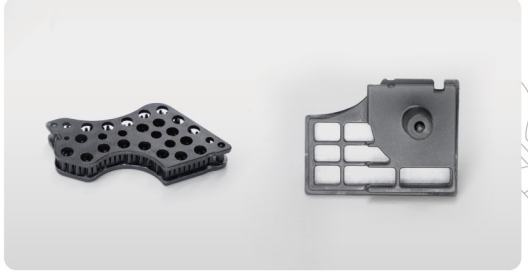

The pressure relief valve is made of fluorine glue, with better sealing.

OE

The pressure relief valve is made of steel sheet material, which is easy to be blocked.

Colliding Condenser

Add a two-stage colliding condenser, improve the separation effect of oil and gas by three times, solve the problem of burning oil.

OE

Without colliding condenser.
