febi 172826

To Fit:

Forklifts

Colour: Blue

Voltage range: 9 - 64 Volt

Cable length: 1,5m

Protection class: IP6K9K

EN

Safety first! with the safety lamp for forklifts from febi

In logistics areas, industrial vehicles are a constant source of danger, which has often led to dangerous accidents. Driving forklifts often cannot be detected in time in areas with many corners. Even acoustic warning signals can be overheard in noisy environments.

In order to significantly increase work safety in logistics areas, febi now offers the febi 172826 safety lamp for forklifts. It is attached to the overhead guard frame of the forklift and projects a bright blue spot onto the floor in front of the vehicle. This provides a warning of the approaching vehicle at unclear corners and in the drive lane area. The safety for pedestrians and other forklift drivers is significantly increased by the timely recognition of the approaching danger.

Thanks to the wide voltage range of 9 - 64 volts and a cable length of 1.5 m, the febi LED safety lamp can be conveniently mounted on almost all forklifts without additional voltage converters or cable extensions using the supplied accessories. Naturally, the febi safety lamp is optimally protected against the ingress of water, e.g. from high-pressure jet cleaners, as well as dust, thanks to the high IP6K9K protection class. Also vibrations and shocks cannot harm it.

In addition to the safety lamp for forklifts, febi offers a comprehensive range of worklights, beacons and strobe lights in original equipment quality for all common applications in the commercial vehicle sector.
